# Population Limits

**Glue your first  
card here.**

Write out your thoughts about the habitat.

---

---

---

---

---

---

**Glue your second  
card here.**

Write out your thoughts about the habitat.

---

---

---

---

---

---

What are the major differences between what you discussed about your first card, and what you discussed about your second card?

Too many of one type of organism.

---

---

Other parts of the answer will vary based on the cards given.

---

---

---

---

---

---

Do you think the habitat would survive based on what you read with your second card? Explain your answer.

Answer will most likely be no. Habitat is overrun, and will be destroyed (or altered).

---

---

---

---

---

---

---

---

Why is it that population control is such an important thing to consider and respect?

A habitat can only support so many organisms. If there are too many of any certain type of organism, then they overuse the resources. As resources get used the organisms that need those resources will not get enough, and will die off. This causes other issues within the habitat, and eventually everything can be affected.

The destruction on one habitat can also affect other habitats, which could have drastic effects.
